WORK EXPERIENCE

Front-End Developer

Hashmesh Labs | Sep 2021 - Present

- Built a React front-end for [Datapolis.city](#) and contributed to the [Datax.js](#) middleware before launching in February of 2022.
- Implemented end-to-end testing for Datapolis using Jest and Puppeteer
- Added linting to Datapolis and Datax.js to enforce conformity in code style and prevent hard-to-debug errors.
- Attended daily stand-ups presenting the work completed the day prior and explaining the objectives for the current day.
- Integrated 5 [Ocean Protocol Subgraphs](#) into a unified gateway using schema stitching, reducing the number of queries and endpoints to manage on front-end applications.
- Created a [pathfinder program](#) to find and store trading paths between cryptocurrencies to allow the trade of tokens that don't directly share a liquidity pool, and automated this process with GitHub actions
- Created a [cryptocurrency list program](#) that regularly curates token lists by creating a script that makes API calls to Ocean Protocol Subgraphs, filters the data against DataX criteria, and posts them to GitHub. This process is also automated using GitHub Actions.

PROJECTS

Portfolio | **Personal Project** | Oct 2021 - Nov 2021

- Front-end React application, displaying past projects, GitHub information, contact information, and more
- Used Tailwind CSS for all styling
- Used [graphql-request](#), graphql, and react-query, to handle and cache requests to GitHub's GraphQL API for project information

Devy | **Chingu Voyage 34** | Oct 2021 - Nov 2021

- Assisted in building [Devy](#), an Instagram-inspired social platform for developers. [Here is the code.](#)
- Worked with a team of two other developers, pair programmed when necessary, and attended twice weekly meetings concerning production.
- Built the front-end of Devy using Svelte and Svelte-Kit.
- Wrote GraphQL queries and mutations to fetch and update user information on the backend
